

Call TSI for your compressor needs.

- *Recently updated pricing*
- *Numerous compressors in stock*
- *Contractor-preferred*

Copeland Scroll® technology has become the compressor of choice for residential and commercial HVACR markets, impressing contractors and original equipment manufacturers (OEMs) with its superior efficiency, proven reliability and ease of installation. With the broadest product line in the industry, Copeland Scroll compressors are available from one to 60 horsepower. They have also become the compressor of choice to lead the industry through major transitions, including the recent 13 SEER minimum-efficiency requirement and the upcoming 2010 R-22 Phaseout.

Reliability

Copeland Scroll compressors' patented scroll design features:

- 70% fewer moving parts
- Ability to start under any system load
- Compact, light-weight design
- Simple design. No complex internal suction and discharge valves.

Efficiency

- Approximately 35% of the electrical energy consumed each year in the U.S. is used by HVACR systems. Compressors make up a vast majority of the energy used in air conditioning and refrigeration systems. That means compressor selection is key to improving the overall efficiency of HVACR systems. The inherent design of Copeland Scroll compressors makes them a preferred choice for more energy-efficient systems.

Applications

- Millions of homeowners enjoy the many advantages of having a Copeland Scroll compressor-powered HVAC system – from reliability to better efficiency and improved comfort. And contractors and homeowners alike can count on Copeland Scroll compressors to deliver these same benefits for years to come.
