Environmentally Safe. Air Friendly.

**#1 CHOICE for
CARPET CUSHION**

SBR...Styrene Butadiene Rubber, the high-strength cushioning material that safely outlives and outperforms run-of-the-mill carpet cushions.

SBR, compounded with Leggett & Platt's exacting formulation, is the vital ingredient in Advance Performance Carpet Cushion. It's the reason why our 100% Pure Synthetic Carpet Cushion products are the safest. There are never any worries about foreign objects, impure recycled scrap cushion, or contaminated elements under your carpet. Leggett & Platt Advance Performance Cushion is simply the strongest - resisting deterioration through effects of time and traffic while providing unmatched comfort.

Non-Toxic

Providing the proper base and consistency for chewing gum, surprisingly, is another function of SBR. Food grade polymers provide firm, regular or soft chew for chewing gum. What better testimony to the non-toxic qualities of SBR?

Stable

Products that are developed and properly compounded with SBR have excellent aging properties to prevent crumbling and to maintain their elasticity. That is why SBR is preferred for durable goods components - tires, batteries, machine parts, belts - which must withstand extreme heat, wear, and chemical abuse, day in and day out, through years of service. SBR brings that same high degree of stability to Leggett & Platt Advance Performance Cushion. Additionally, the Radiant Panel Association recommends carpet cushion products compounded with SBR for homes with radiant floor systems.

Versatile

Chances are, SBR is already an ingredient in your new carpeting. It is recognized as a highly desirable bonding agent for holding carpet fibers permanently to carpet backing while providing overall added resiliency to the carpet itself. The carpet industry has long recognized the value of this important ingredient.

Built to Last

Leggett & Platt Advance Performance Carpet Cushion will maintain its resiliency and performance characteristics for years of worry free comfort, support, thermal insulation and carpet protection.*

Serviceable

SBR adds years to the life of many consumer items - footwear, sporting goods, flooring - which must retain their original shape and elasticity despite repeated punishment. Because SBR is so stable, it creates an inseparable bond between the components of Advance Performance Cushion to maintain the service qualities you will enjoy through years of use.

Safe

With careful compounding, it is so harmless it is approved for a wide variety of children's toys and drug sundries. Because SBR is mildew resistant, Advance Performance Cushion will not promote the growth of mold or mildew when installed on-slab or below grade where moisture and soil tend to accumulate.

Advance Performance Carpet Cushion, with SBR, is recommended by the Radiant Panel Association as the preferred choice for your radiant floor system.

Advance Performance Carpet Cushion, with SBR, is approved by the Carpet and Rug Institute, meeting the indoor air quality standards.
